

## Storage System Engineering

Many industries store and handle chemicals to distribute to others or to produce products. Both state and federal rules can apply to the storage of chemicals. Some of these chemicals can pose a significant threat to workers or the public if they are not stored properly. These apply to liquids, solids, gases, virgin materials, intermediate products, mixed products and waste products, as well as products used for cleaning, for fuel and for heat transfer. These materials can be stored in aboveground systems, below ground systems or a combination of both. We can help you safely utilize these materials and comply with the myriad of rules that apply.

### Endpoint Solutions' storage system experience includes:

- State and local construction and installation permits for hazardous chemicals and flammable/combustible liquids & gases.
- Preparation of Spill Prevention Control and Countermeasure plans (SPCC).
- Containment design for liquids and solids.
- Storage vessel recertification.
- Underground storage and aboveground tank system evaluations and upgrades.
- Process Safety Management Programs for flammable/hazardous liquids & chemicals.
- Noncompliance issue negotiations with regulatory agencies.

Endpoint Solutions' staff has over 20 years of experience in working with chemical storage systems. The staff at Endpoint can help you plan a new system, update an existing system or evaluate a system that you are considering acquiring. If improvements are needed, Endpoint can help you determine the best course of action, obtain the correct permits and implement the needed changes. From something as simple as getting the necessary permits to install a fuel tank for a backup generator to something as complex as constructing a large storage and processing facility, we can help you get the job done.
